

Calling Card Solution

Overview

FreeGo Calling Card solution helps ITSP and service providers to offer pre-paid VoIP calling services. The Calling Card service is one of the most widespread markets in the VoIP industry especially in countries where there are numerous immigrants and ethnic-groups. It is suitable for consumer segments of students, business and leisure travelers, expatriates, immigrants. Furthermore, many companies and individuals have also shift to prepaid basis services so they can take advantage of the cost-effective solutions.

How it works

- The users dial *182, prompts the caller to enter his/her account ID (PIN).
- Once the previous step is completed, the system authenticates the caller, prompts the VoIP gateway to announce the account balance to him/her, and signals him/her to dial the destination number.
- After the destination number has been entered, the system calculates the maximum call duration and plays it back to the caller. Once the call is completed, it is charged to the caller's account balance.

Highlights

- PIN-based authorization
- Intuitive web management interface
- Multiple tariff packages, different tariffs for customers
- Account recharge using cards via IVR or web interface
- Advanced batch management(activation, deactivation, change parameters)
- Web self-care pages enable end users to browse CDRs, make payments, recharge accounts
