

FreeGo VoIP Solution

Overview

Nowadays, the rapid growth of VoIP technology gives service providers great opportunities for new service revenue, sustainable cost reduction and flexible network development. As a stable, high effective and profitable one stop VoIP solution, FreeGo enables service providers to build a converged telecommunication infrastructure and carrier platform.

With the FreeGo VoIP solution, service providers offer customers a range of value-added services such as conference, fax over IP, Web click call, etc. These services are built in the carriers' networks, delivered from application servers running in their data center.

Applications

ITSP, Telecom operator, Service provider, System integrator
